# Installing WordPress

Version 3.5.1

Semantic Personal Publishing Platform

## First Things First

---

Welcome. WordPress is a very special project to me. Every developer and contributor adds something unique to the mix, and together we create something beautiful that I'm proud to be a part of. Thousands of hours have gone into WordPress, and we're dedicated to making it better every day. Thank you for making it part of your world.

— Matt Mullenweg

## Installation: Famous 5-minute install

---

1. Unzip the package in an empty directory and upload everything.
2. Open [wp-admin/install.php](#) in your browser. It will take you through the process to set up a `wp-config.php` file with your database connection details.
  1. If for some reason this doesn't work, don't worry. It doesn't work on all web hosts. Open up `wp-config-sample.php` with a text editor like WordPad or similar and fill in your database connection details.
  2. Save the file as `wp-config.php` and upload it.
  3. Open [wp-admin/install.php](#) in your browser.
3. Once the configuration file is set up, the installer will set up the tables needed for your blog. If there is an error, double check your `wp-config.php` file, and try again. If it fails again, please go to the [support forums](#) with as much data as you can gather.
4. **If you did not enter a password, note the password given to you.** If you did not provide a username, it will be `admin`.
5. The installer should then send you to the [login page](#). Sign in with the username and password you chose during the installation. If a password was generated for you, you can then click on 'Profile' to change the password.
